SUMMARY

Computer Science and Engineering undergraduate graduating in 2027, specializing in Android application development with Kotlin and Java. Experienced in building user-focused Android and full-stack applications using Android SDK, XML, Firebase, Node.js, MySQL, and REST-based technologies. Developed applications for word games, cement supply-chain coordination, plant disease detection, agricultural recommendations, and blockchain-based product tracking. Strong foundation in Data Structures and Algorithms, Object-Oriented Programming, DBMS, and software engineering, with a focus on building practical and scalable mobile applications.

TECHNICAL SKILLS

Languages: Kotlin, Java, Python, JavaScript, PHP

Android: Android Studio, Android SDK, XML, Firebase, Material Design

Backend & APIs: Node.js, REST APIs, Firebase Authentication, Firebase Realtime Database

Databases: MySQL, Firebase Realtime Database, SQLite

Web: HTML, CSS, JavaScript, PHP

Tools & Platforms: Git, GitHub, Google Cloud

Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, Software Engineering

PROJECTS

Amara Connect – Cement Supply Chain Platform

[GitHub](#)

Kotlin, Android Studio, Firebase, REST APIs, Google Maps

- Built a role-based Android platform connecting manufacturing companies, cement agencies, delivery drivers, and end customers.
- Implemented role-based workflows for company, agency, driver, and customer operations including order management, supply tracking, and delivery coordination.
- Integrated Firebase-based authentication and cloud data management for user and transaction information.
- Designed order lifecycle tracking from **Created** to **Delivered** and **Completed** to improve supply-chain visibility.
- Integrated location-based functionality to support delivery coordination and tracking.

Plant Disease Detection & AgriStore

[GitHub](#)

Kotlin, XML, Firebase, Node.js

- Developed an Android application for image-based plant disease detection and agricultural assistance.
- Connected disease detection results with an AgriStore module to provide fertilizer and pesticide recommendations.
- Implemented Firebase Authentication and Realtime Database for secure user access and application data management.
- Integrated Node.js backend services for product listings and recommendation-related functionality.

Blockchain-Based Supply Chain Management System

[GitHub](#)

HTML, CSS, JavaScript, PHP, MySQL, Blockchain

- Developed a supply-chain management system focused on product tracking, lifecycle management, and traceability.
- Implemented role-based authentication and product tracking functionality.
- Integrated MySQL for inventory and product lifecycle data management.
- Applied blockchain concepts to improve transparency and traceability of supply-chain records.

EDUCATION

East West Institute of Technology, Bengaluru

September 2023 – September 2027

Bachelor of Engineering in Computer Science and Engineering

Relevant Coursework: Data Structures, Algorithms, DBMS, Operating Systems, Computer Networks, Software Engineering

CERTIFICATIONS

- Google Cloud Engineering Certificate
- Develop Your Google Cloud Network – Skill Badge
- Mastering Kotlin for Android Development
- 30 Days Data Structures and Algorithms Bootcamp

ACHIEVEMENTS

- Earned multiple Google Cloud Skill Badges through hands-on cloud laboratory activities.
- Developed and released the Wordaire Android application through GitHub Releases.
- Built multiple Android and full-stack applications using Kotlin, Firebase, Node.js, PHP, and MySQL.
